TIME 2027: 3rd International Workshop on Transformative Insights in Multi-faceted Evaluation

ACM Reference Format:
. 2018. TIME 2027: 3rd International Workshop on Transformative Insights in Multi-faceted Evaluation. In *Proceedings of Make sure to enter the correct conference title from your rights confirmation email (Conference acronym 'XX)*. ACM, New York, NY, USA, 4 pages. https://doi.org/XXXXXXX.XXXXXXX

1 Organisers and In-Person Attendees

i. Lei Wang (✉), Griffith University
ii. Md Zakir Hossain (✉), The University of New South Wales
iii. Zicheng Pan (✉), The University of Queensland
iv. Wenshuo Chen (✉), Hong Kong University of Science and Technology (Guangzhou)
v. Syed Mohammed Shamsul Islam (✉), Edith Cowan University
vi. Tom Gedeon (✉), Curtin University
vii. Sabrina Caldwell (✉), The University of New South Wales
viii. Rafiqul Islam (✉), Charles Sturt University
ix. Mohammad A. Razzaque (✉), Teesside University
x. Arjumand Younus (✉), University College Dublin

In-person attendance: Mohammad A. Razzaque, Md Zakir Hossain, Syed Mohammed Shamsul Islam, and Rafiqul Islam plan to attend the workshop in person.

2 Proposed Duration

A **full-day** format will build on the successful TIME 2025 and 2026 programmes and accommodate papers, invited talks, posters, a panel, and interactive breakout discussions. The additional time is essential for meaningful participant interaction and developing shared priorities for evaluating emerging Web AI systems.

3 Workshop Objectives

TIME 2027 aims to advance the practice of evaluating modern Web AI systems through a multi-faceted, interdisciplinary, and application-oriented perspective. As foundation models, multimodal systems, generative AI, and AI agents become increasingly integrated into Web applications, their capabilities can no longer be adequately assessed by conventional task-specific accuracy measures alone. The workshop will bring together researchers and practitioners to examine what should be evaluated, how it should be measured, and how evaluation results can translate into reliable and responsible real-world systems.

The workshop has **four main objectives**:

i. **Advance multi-faceted evaluation:** Develop evaluation methodologies that move beyond single-task performance to jointly assess capability, reliability, robustness, safety, fairness, interpretability, uncertainty, efficiency, and real-world utility.
ii. **Evaluate emerging Web AI systems:** Identify new evaluation challenges arising from foundation models, multimodal AI, generative systems, retrieval-augmented systems, and agentic Web applications operating across heterogeneous data, tools, and environments.
iii. **Promote rigorous and actionable evaluation:** Encourage reproducible benchmarks, datasets, protocols, tools, and evaluation practices that provide meaningful evidence beyond headline performance numbers.
iv. **Build an interdisciplinary evaluation community:** Connect researchers, industry practitioners, and early-career researchers across Web mining, information retrieval, multimodal learning, responsible AI, security, privacy, and human-centred AI to identify shared challenges and future research directions.

4 Workshop Format and Approximate Timeline

Building on TIME 2025 [5] and TIME 2026 [4], the programme will combine invited talks, paper presentations, posters, an interactive panel, and breakout discussions.

Time	Activity
09:00–09:15	**Welcome and Opening.**
09:15–10:00	**Invited Session I:** Emerging challenges in evaluating foundation, multimodal, and generative Web AI.
10:00–10:50	**Paper Session I:** Selected oral presentations with extended Q&A and discussion.
10:50–11:20	**Poster and Networking Session:** Informal technical exchange between authors and participants.
11:20–12:05	**Invited Session II:** Real-world evaluation, reliability, and responsible deployment of AI systems.
12:05–12:45	**Interactive Panel** "What should we measure Beyond Accuracy?" with audience questions & discussion.
12:45–13:45	**Lunch and Poster Interaction.**
13:45–14:35	**Paper Session II:** Selected oral presentations.
14:35–15:20	**Breakout Discussions:** Participant-led groups addressing key evaluation challenges, benchmarks, reproducibility, and open problems.
15:20–15:50	**Invited Session III:** Human-centred and trustworthy evaluation of next-generation Web AI.
15:50–16:35	**Interactive Synthesis Session:** Groups report key insights and develop shared research priorities.
16:35–17:00	**Closing Discussion:** Open problems, future collaborations, and directions for TIME 2028.

The exact number of oral and poster presentations will depend on the number and quality of accepted submissions. The programme

Permission to make digital or hard copies of all or part of this work for personal or classroom use is granted without fee provided that copies are not made or distributed for profit or commercial advantage and that copies bear this notice and the full citation on the first page. Copyrights for components of this work owned by others than the author(s) must be honored. Abstracting with credit is permitted. To copy otherwise, or republish, to post on servers or to redistribute to lists, requires prior specific permission and/or a fee. Request permissions from permissions@acm.org.

deliberately allocates substantial time to discussion, poster interaction, and breakout activities so that the workshop functions as a forum for community building and research exchange rather than a sequence of presentations.

5 Workshop Topics and Themes

The rapid evolution of Web AI is fundamentally changing the evaluation problem. Foundation models, large language models, multimodal models, generative AI, retrieval-augmented systems, and AI agents are increasingly embedded in search, recommendation, content creation, social platforms, knowledge systems, and other Web applications. These systems operate across heterogeneous inputs, interact with users and external tools, and may generate complex outputs whose quality cannot be captured by a single accuracy score. At the same time, failures such as hallucination, bias, unsafe generation, privacy leakage, poor calibration, and unreliable tool use can have substantial real-world consequences [1–3, 6, 7]. TIME 2027 therefore focuses on a central question for the next generation of Web AI: *how should we evaluate systems whose capabilities, behaviours, and risks extend far beyond conventional task-level performance?* The topic is particularly timely as increasingly capable AI systems move rapidly from controlled benchmarks into real-world Web environments, creating an urgent need for evaluation methodologies that are rigorous, reproducible, human-centred, and aligned with real-world use.

TIME 2027 will welcome research on multi-faceted evaluation of foundation models, multimodal and generative AI, retrieval-augmented systems, AI agents, and other emerging Web technologies. Topics include, but are not limited to, factuality and hallucination, robustness and reliability, uncertainty and calibration, safety and security, privacy, fairness and bias, interpretability, human-centred and user-centric evaluation, cross-cultural and cross-domain evaluation, benchmark and dataset design, annotation quality, reproducibility, efficiency and sustainability, evaluation under distribution shift, and real-world deployment. We particularly encourage surveys, systematic reviews, benchmark analyses, evaluation frameworks, tools, negative results, position papers, and industry case studies that provide actionable insights rather than reporting performance improvements alone. By bringing together complementary perspectives from Web research, machine learning, responsible AI, security, privacy, and human-centred AI, the workshop seeks to identify common evaluation principles and research priorities that can transfer across Web applications and domains.

6 Match with The Web Conference 2027

TIME 2027 is closely aligned with The Web Conference because the Web is not only a major deployment environment for modern AI, but also a uniquely challenging environment in which to evaluate it. Search engines, recommender systems, social platforms, knowledge systems, content-generation tools, and increasingly autonomous Web agents are being transformed by foundation and multimodal models. These systems must operate with heterogeneous information, evolving content, diverse users, external tools, and real-world constraints. Consequently, evaluating Web AI requires more than measuring performance on static datasets: it requires understanding reliability, safety, fairness, robustness, human utility, and behaviour under realistic and changing conditions. TIME 2027 directly addresses this emerging evaluation challenge.

The workshop also complements the broader technical and societal scope of The Web Conference by connecting methodological advances in AI evaluation with concrete Web applications and their societal implications. Its multi-faceted perspective brings together communities that are often evaluated separately, including Web mining, information retrieval, recommender systems, multimodal learning, foundation models, human-centred AI, security, privacy, and responsible AI. This cross-community focus is particularly valuable as the boundaries between these areas increasingly disappear in modern Web systems.

TIME has also established a track record within The Web Conference. The 2025 edition established a cross-domain forum combining evaluation, survey, and practical perspectives, while the 2026 edition expanded toward responsible AI evaluation, trustworthy multimodal analytics, cross-domain benchmarking, industry collaboration, and interactive demonstrations. TIME 2027 builds naturally on this progression while introducing a more focused agenda around evaluating foundation models, multimodal generative AI, and agentic Web systems. The workshop therefore provides a timely venue for the Web community to critically examine not only what emerging AI systems can do, but also whether they can be trusted, how their limitations should be measured, and what evaluation practices are needed for their responsible deployment.

TIME 2027 is designed to complement rather than duplicate the main conference programme. Its emphasis is not on proposing another individual model or application, but on developing transferable evaluation principles, methodologies, benchmarks, and practical lessons. The workshop's combination of peer-reviewed research, invited perspectives, industry-relevant insights, and participant-led discussion will provide a focused forum for identifying evaluation gaps and building consensus around important research directions for trustworthy and transformative Web AI.

7 Program Committee

The tentative Program Committee brings together researchers with complementary expertise in foundation models, multimodal and generative AI, Web technologies, responsible AI, security, privacy, computer vision, and human-centred AI. The committee also provides broad institutional and geographic coverage across Australia, Hong Kong, the United States, South Korea, Bangladesh, and Singapore. The following researchers are proposed as Program Committee members. Their current status is indicated as **C** (Confirmed), **I** (Expressed interest), **CT** (Contacted), or **TBC** (To be contacted).

- Syuan-Hao Li, Griffith University **C**
- Jingxi Zhang, Griffith University **C**
- Xi Zhou, Griffith University **C**
- Hongyu Nie, Griffith University **C**
- Zhicheng Zhang, UNSW Canberra **C**
- Xu Han, Griffith University **C**
- Zekun Long, Griffith University **C**
- Wangshu Cai, Griffith University **C**
- Haozhe Jia, HKUST (Guangzhou) **C**
- Shaofeng Liang, HKUST (Guangzhou) **CT**
- Wenxiang Diao, UNSW Sydney **C**

- Yu Zhang, UNSW Canberra **TBC**
- Gennie Nguyen, NTU **TBC**
- Haosen Li, HKUST (Guangzhou) **C**
- Kaishen Yuan, HKUST (Guangzhou) **CT**
- Edwin Kwadwo Tenagyei, Griffith University **C**
- Xi Ding, UW-Madison **C**
- Ali Zia, La Trobe University **TBC**
- Alex Rassau, ECU **TBC**
- Jumana Abu-Khalaf, ECU **TBC**
- Douglas Chai, ECU **TBC**
- Mohammad Awrangjeb, Griffith University **C**
- Minhaz Uddin Ahmed, Inha University **TBC**
- Duc-Son Pham, Curtin University **TBC**
- Shafin Rahman, North South University **TBC**
- Soroor Behbahan, UQ **TBC**

The committee will be finalised to approximately 18–20 members, with selection guided by expertise, availability, and diversity. In addition to strong representation from Australian institutions, the proposed PC includes researchers from Asia, North America, and Europe, as well as complementary expertise spanning academia and applied research.

8 Diversity and Inclusion

TIME 2027 brings together organisers from diverse institutions, countries, career stages, and research backgrounds, spanning Griffith University, UNSW, UQ, ECU, Curtin University, Charles Sturt University, HKUST (Guangzhou), University College Dublin, and Teesside University. The team includes Ph.D. students, early-career researchers, and senior academics, with expertise spanning AI, multimodal and generative AI, human-centred AI, cybersecurity, privacy, data science, and digital policy, as well as experience across academia, industry engagement, and professional societies.

The invited-speaker programme will complement this diversity through representation across gender, nationality, institution, research area, and career stage. The current invited speakers bring international perspectives from Ireland and Luxembourg, complementing the Australian organising team. We will actively seek additional speakers and PC members from diverse geographic, institutional, gender, career-stage, and professional backgrounds, including both academic and industry/applied research perspectives. Diversity will be an explicit consideration in final speaker and committee selection.

9 Workshop Audience & Expected Participation

The workshop is intended for researchers, practitioners, PhD students, postdoctoral researchers, and other professionals working on Web AI and its evaluation. It will be particularly relevant to researchers working on foundation models, multimodal AI, generative AI, AI agents, information retrieval, recommender systems, Web mining, responsible AI, human-centred AI, security, privacy, and trustworthy machine learning.

Based on the growing participation and submission volume of the previous TIME editions, we expect approximately 80–120 participants. We anticipate approximately 30–50 submissions and approximately 15–25 accepted papers, depending on submission quality and the final workshop format. Accepted papers will be selected for oral and poster presentation to maximise both dissemination and interaction.

10 Previous Editions

[TIME 2025@WWW 2025] The inaugural TIME workshop was held on April 29, 2025, in Sydney, Australia, as part of The Web Conference 2025. It was conducted in a hybrid format and attracted around 30 participants from academia, industry, and government. Six papers were accepted for oral presentation and five for poster presentation. The programme also included two keynote talks, an interactive panel, and a poster session. TIME 2025 established the workshop's central mission of bringing together researchers and practitioners to exchange practical insights, evaluations, surveys, and cross-domain perspectives on Web technologies.

[TIME 2026@WWW 2026] The second edition, TIME 2026, was held as part of The Web Conference 2026 in Dubai, United Arab Emirates (around 50 online participants). The workshop broadened its scope toward responsible AI evaluation, trustworthy multimodal analytics, cross-domain benchmarking, industry collaboration, and emerging evaluation challenges. It accepted 15 papers, including 10 oral and 5 poster presentations. The programme also introduced an interactive demonstration component and continued its emphasis on early-career researcher engagement.

What is new in TIME 2027. TIME 2027 will build on these two successful editions while providing a substantially more focused and timely agenda. In particular, the 2027 edition will:

i. place foundation models, multimodal AI, generative AI, and agentic Web systems at the centre of the evaluation discussion;
ii. move beyond static benchmark evaluation toward evaluation under realistic, interactive, and changing conditions;
iii. emphasise actionable evaluation protocols, reproducibility, and practical tools rather than reporting performance alone;
iv. strengthen interaction between academic researchers, industry practitioners, and early-career researchers;
v. introduce structured breakout discussions to identify community priorities and open evaluation problems; and
vi. consolidate lessons from the first two editions into a broader research agenda for trustworthy and transformative Web AI evaluation.

11 Short Bios of Organisers

Lei Wang is a Research Fellow (Grade 2) in the School of Engineering and Built Environment at Griffith University and a Visiting Scientist at Data61/CSIRO. He founded the Temporal Intelligence and Motion Extraction (TIME) Lab and works on computer vision, video understanding, anomaly detection, and AI evaluation. He has published in leading venues including CVPR, ICCV, ECCV, TPAMI, IJCV, and TIP. Dr. Wang was the lead organiser of TIME 2025 and TIME 2026 and has served as an Area Chair for ICLR, NeurIPS, ACM Multimedia, ICASSP, and ICPR. He also received an Outstanding Area Chair recognition at ACM Multimedia.

Md Zakir Hossain is a Lecturer at The University of New South Wales, whose research focuses on AI, machine learning, multimodal and human-centred computing, and digital health, with interests in responsible and practical AI. He has experience organising academic workshops and conferences, including serving as Publication Chair

for DICTA 2024 and co-organising the TIME workshops in 2025 and 2026. His expertise in applied and responsible AI supports TIME 2027's interdisciplinary evaluation focus.

Zicheng Pan is a Research Fellow at The University of Queensland, with research interests in time series analysis, incremental learning, domain adaptation, and vision-language models. He served as Program Chair for TIME 2026 at The Web Conference and has contributed to major international conferences including CVPR, ICCV, NeurIPS, ICML, AAAI, and IJCAI as a reviewer and program committee member. His research and workshop-organising experience support TIME 2027's focus on emerging AI evaluation.

Wenshuo Chen is a Ph.D. student at The Hong Kong University of Science and Technology (Guangzhou), working on artificial intelligence-generated content (AIGC), Physical AI, and human-centred AI. He has experience with generative and multimodal AI, including text-to-image and text-to-motion generation, and received the Best Paper Runner-Up and Best Student Paper Awards at TIME 2026. His research experience with the TIME workshop contribute to its focus on emerging AI technologies and evaluation.

Syed Mohammed Shamsul Islam is a Senior Lecturer at ECU and Founding Lead of the 3D Sensing, Visualisation and Analytics Lab. His research spans machine learning, data science, computer vision, and visual analytics. He has extensive experience organising international research events, including General Chair of DICTA 2024 and Technical Program Chair of IEEE FMLDS 2026, and serves in leadership and editorial roles across the IEEE community. His interdisciplinary expertise and substantial event-organising experience strengthen TIME 2027's cross-domain evaluation focus.

Tom Gedeon is a Professor at Curtin University and a leading researcher in human-centred AI and neural networks. He has extensive experience contributing to and organising research events that promote interdisciplinary knowledge exchange.

Sabrina Caldwell is a Senior Lecturer at UNSW Canberra in both the School of Systems and Computing and the School of Humanities and Social Sciences. Her areas of teaching and research focus on the connection between humans and computing, particularly trust in online media, human-centred computing, and human-AI teaming. Sabrina is a member of the JPEG Committee, where she is co-chair of JPEG Trust and an editor of the first ISO standard in online trust (JPEG Trust ISO/IEC 21617-1 2025) as well as co-chair of JPEG Systems and Integration.

Rafiqul Islam is a Professor at CSU and leads its Cybersecurity research team. His research covers cybersecurity, malware analysis, cloud and IoT security, and privacy. He has published over 200 peer-reviewed papers and is a co-recipient of more than $7M in external funding. He received the 2021 Australian Information Security Association Cyber Security Researcher of the Year Award. His research leadership and expertise in cybersecurity and privacy complement TIME 2027's focus on trustworthy and secure AI evaluation.

Mohammad A. Razzaque is an Associate Professor at Teesside University, UK, specialising in cybersecurity, secure AI, generative AI, and IoT. He has published over 75 papers and secured approximately £1M in research funding. He has organised workshops on ethical hacking, data analysis, and IoT and served as a Track Chair and Program Committee member for international conferences. His expertise in secure and trustworthy AI complements TIME 2027's evaluation focus.

Arjumand Younus is an Assistant Professor at University College Dublin, specialising in AI, computational social science, and digital policy, with research interests in machine learning, NLP, and AI for social good. She holds a joint PhD in Computer Science from the National University of Ireland Galway and University of Milano-Bicocca and has experience across academia and industry, including as a Research Scientist at Afiniti AI. She also co-directs Women in Research Ireland, supporting greater representation of women and under-represented groups in academia. Her interdisciplinary expertise strengthens TIME 2027's focus on human-centred and responsible AI evaluation.

12 Invited Speakers

Proposed invited speakers (contacted):

- Tahar Kechadi, Professor at University College Dublin
- Debi Ashenden, Director, Institute for Cyber Security (IFCYBER)
- Djamila Aouada, Deputy Director at SnT Research Center | Head of Computer Vision, Imaging and Machine Intelligence (CVI2) Research Group
- Muhammad Abeer Irfan, Research Fellow at TU Dublin | AI Scientist | Machine Learning & Computer Vision Expert | Cutting-Edge Researcher
- ASM Ashraf Mahmud, AI-Powered Smart Grid Innovation | Microsoft Azure and AWS Cloud AI Solutions | AI/ML Consultant

We will confirm availability before the final programme is announced and will seek additional representation where necessary to strengthen gender, geographic, institutional, and industry diversity.

13 Poster Session

We request approximately **10 poster boards**, subject to the final number of accepted poster papers.
